Deck Installation ..... 3

## Introduction

This guide provides information on safe and proper installation of Husky Rack & Wire (Husky) decking. The installation drawings that follow are intended as basic guides to installation of standard Husky components. Additional information and videos can be found on our website at [www.huskyrackandwire.com](http://www.huskyrackandwire.com). Failure to properly install, use and maintain Husky products can result in loss of use, collapse, property damage, personal injury or death.

We recommend installation be performed by qualified individuals with experience in the proper assembly of storage and security products and knowledge of industry and government standards and guidelines. All users should carefully read these instructions in their entirety and ensure that all members of the installation team wear a hardhat, hard-toe boots and gloves without cuffs during installation.

## Warnings

- The rack structure must be installed in a plumb, level, and square condition. Floor shims should be utilized as needed to ensure a level installation. The area where rack is to be installed should be free of all obstructions. Every upright must be anchored to an adequate concrete floor.
- If unstable during installation, temporary bracing may be necessary until the product is completely assembled.
- Do not intermingle new and existing/used parts, and do not combine with rack made by other manufacturers. Any and all warranties are made void if non-Husky products are used in conjunction with Husky products.
- Do not cut, weld or in any other way modify any component of your Husky storage rack. Doing so will render all product warranties null and void.
- Do not substitute any parts or hardware not approved by Husky.
- Do not change the configurations (such as adjusting storage levels). Doing so can adversely affect the load carrying capacity and reduce the structural integrity of the rack system.
- Do not install damaged or compromised rack components.
- Do not install Husky products outdoors, unless specifically designed for this purpose.
- **Never** stand, walk or climb on racks, during or after assembly. Storage racks are not designed to be stepped on or climbed on. A slip or fall may result in serious injury or death. It is the owner's responsibility to communicate this important warning to all who come into the proximity of its storage rack.
- Installation of capacity signage is highly recommended. These signs should identify the characteristics for which the rack was designed, such as load size, load weight and rack configuration. These signs should be prominently located for easy visibility and should be permanently affixed to the rack structure.
- Husky post protectors do not provide a guarantee against rack collapse.

PROPER ASSEMBLY IS THE RESPONSIBILITY OF THE OWNER AND IS NOT COVERED BY ANY WARRANTY OF HUSKY. HUSKY DISCLAIMS ALL LIABILITY WITH RESPECT TO INSTALLATION OF ITS PRODUCTS.

## Inspection and Maintenance

Once installed, the owner should ensure that monthly inspections are performed and that the rack system is properly maintained in accordance with the "Specification for the Design, Testing, and Utilization of Industrial Steel Storage Racks – 2012 Edition" set forth by the Rack Manufacturers Institute, available at <https://www.mhi.org/rmi>.

# DECK INSTALLATION

After all beams have been installed, install decks as shown. **NOTE:** Ensure that decks are spread evenly across the beams. Also slide decks across the beams to make sure that there is not a bow in the beam.
