

DATA CENTER CAGES

Balance **security, airflow, and cost** with Husky Rack & Wire's data center and server cages.

EASY TO INSTALL AND CUSTOMIZE FOR SUBFLOOR INTEGRATION

Husky Rack & Wire's welded wire partitions meet or exceed the Code of Federal Regulations, as outlined in Section 1301.72, by providing:

- Welded wire partitions using 2" x 2" square, 8-gauge mesh (1.84" openings)
- Panels that can be easily modified in the field to avoid building obstructions and comply with code requirements
- Layout with a maximum 3½" sweep space
- Swing doors with hydraulic closers and/or self-closing slide doors
- Electronic door monitors eliminate the need for keys: electric strikes on swing doors and maglock locks on slide doors, both with proximity readers
- A ceiling, unless extended heights are attached to the building roof

NOTE: The installer and/or end user is responsible for ensuring lag bolts are properly installed, extended heights comply with the roofline, and any required alarms are provided per code.
